

Quick Start – Gpx_To_Json

If you don't already know how to use Roadbook Editor, this tool is not for you.

1. On the GPS (during reconnaissance)

- Create a new waypoint file (.wpt)
 - Start track recording
 - Create a waypoint:
 - at every important junction
 - at obstacles or reference points
 - Stop recording at the finish
-

2. On your computer

Copy into the same folder:

- .gpx file (track)
 - .wpt file (waypoints)
-

3. Conversion

- Launch Gpx_To_Json
 - Select the .gpx file
 - A .json file is automatically created
-

4. Roadbook Editor

- Open the .json file
 - Complete:
 - icons
 - descriptions
 - details
-

Important notes

- Waypoints must be in the same folder as the GPX file
- No need to rename waypoints (wpt001, etc.)

- Always review the roadbook before use
-

In short

👉 Mark points on the GPS → convert → refine
